

Amendments to the Claims

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1-26. (canceled)

27. (currently amended) An apparatus for displaying luminous radiation on a shell of an aircraft, comprising:

at least one light source ~~for producing~~ that produces luminous radiation;

at least one projection device, arranged within the interior of the shell, for converting that converts the luminous radiation into projectable luminous radiation and projects the projectable luminous radiation across the interior of the shell; and

at least one translucent turret sealed against the interior of the shell at a respective at least one fixed location;

wherein each said at least one projection device is arranged within a respective one of said at least one translucent turret;

~~wherein~~

~~the at least one projection device is arranged in the interior of the shell, for projecting the luminous radiation through the interior onto the shell; and~~

wherein the shell is translucent at least in portions, ~~for making~~ such that the projected luminous radiation is visible from the outside the shell;

~~characterized in that~~

wherein the shell includes at least one lead-through is arranged at the shell of the aircraft for arranging of at least one turret, which is translucent and sealed against the interior of the shell, wherein each said at least one lead-through is disposed at a respective one of the at least one fixed location; and

~~the~~ wherein each said at least one projection device is ~~exchangeably~~ arranged in the respective at least one turret such that the projection device can be installed within and removed from the turret from outside the shell through the lead-through.

28. (currently amended) The apparatus according to claim 27, ~~characterized in that~~ wherein the at least one light source is arranged outside the shell, in particular in a loading area of the aircraft.
29. (currently amended) The apparatus according to claim 27, ~~characterized in that~~ further comprising at least one light wave guide is arranged along the shell.
30. (currently amended) The apparatus according to claim 27, ~~characterized in that~~ further comprising at least one further projection device ~~for converting that converts~~ the luminous radiation into projectable luminous radiation ~~is provided,~~ which is adapted ~~for projecting to project~~ luminous radiation in arbitrarily definable directions.

31. (currently amended) The apparatus according to claim 27, ~~characterized in that~~ wherein the aircraft is an airship.
32. (currently amended) The apparatus according to claim 27, ~~characterized in that~~ wherein the at least one light source is a laser light source.
33. (currently amended) The apparatus according to claim 27, ~~characterized in that~~ further comprising at least one light wave guide ~~is provided for guiding that~~ guides the luminous radiation from the at least one light source to the at least one projection device.
34. (currently amended) The apparatus according to claim 27, ~~characterized in that~~ wherein the at least one projection device is adapted ~~for projecting to project~~ image-carrying luminous radiation.
35. (currently amended) The apparatus according to claim 27, ~~characterized in that~~ wherein the at least one projection device is adapted ~~for projecting to project~~ effect light.
36. (currently amended) The apparatus according to claim 27, ~~characterized in that~~ wherein the at least one projection device is adapted for projecting spatial and/or time variable luminous radiation and/or moving pictures.
37. (currently amended) The apparatus according to claim ~~27~~ 34, ~~characterized in that~~ wherein the image-carrying luminous radiation is composed of several partial images and/or is projected by several projection devices.
38. (currently amended) The apparatus according to claim 27, ~~characterized in that~~ wherein the at least one light source is housed in the at least one projection device.

39. (currently amended) The apparatus according to claim 27, ~~characterized in that~~
wherein the at least one projection device is adapted for projecting image-carrying
luminous radiation ~~which~~ that is simultaneous with external events.

40. (previously presented) Aircraft, in particular airship, comprising at least one
apparatus according to claim 27.

41-49. (canceled)

50. (currently amended) The apparatus according to claim 27, ~~characterized in that~~
further comprising at least one light wave guide ~~is provided for guiding that~~
guides the luminous radiation from the at least one light source to the at least one
projection device via the at least one lead-through.

51. (canceled)

52. (currently amended) Apparatus for displaying luminous radiation on a shell of an
aircraft, comprising:

at least one light source for producing luminous radiation; and

at least one projection device for converting the luminous radiation into
projectable luminous radiation, wherein the at least one projection device is
arranged against an inside surface of the shell at a lead-through through the shell,
such that the at least one projection device can be installed within and removed
from the shell from outside the shell through the lead-through;

wherein the at least one projection device is arranged in the interior of the shell;
~~for projecting~~ so as to project the luminous radiation through the interior on to the
shell; and

wherein the shell is translucent at least in portions, for making the projected luminous radiation visible from the outside;

whereby the at least one projection device is adapted for projecting image carrying luminous radiation which is simultaneous with external events and the at least one projection device is adapted for projecting at least one of spatial luminous radiation, time-variable luminous radiation, and moving pictures.

53. (currently amended) Apparatus according to claim 52, ~~characterized in that~~ wherein the at least one light source is arranged outside the shell, in particular in a loading area of the aircraft.
54. (currently amended) Apparatus according to claim 52, ~~characterized in that~~ further comprising at least one light wave guide ~~is arranged along the shell.~~
55. (currently amended) Apparatus according to claim 52, ~~characterized in that~~ wherein the aircraft is an airship.
56. (currently amended) Apparatus according to claim 52, ~~characterized in that~~ wherein the at least one light source is a laser light source.
57. (currently amended) Apparatus according to claim 52, ~~characterized in that~~ further comprising at least one light wave guide ~~is provided for guiding that~~ guides the luminous radiation from the at least one light source to the at least one projection device.
58. (currently amended) Apparatus according to claim 52, ~~characterized in that~~ wherein at least one said projection device is adapted for projecting image carrying luminous radiation.

59. (currently amended) Apparatus according to claim 52, ~~characterized in that~~
wherein at least one said projection device is adapted for projecting effect light.
60. (currently amended) Apparatus according to claim 52, ~~characterized in that~~
wherein the image carrying luminous radiation is at least one of composed of
several partial images and projected by several projection devices.
61. (currently amended) Apparatus according to claim 52, ~~characterized in that~~
wherein at least one said light source is housed in at least one projection device.
62. (previously presented) The apparatus according to claim 52, further comprising at
least one lead-through arranged at the shell of the aircraft for arranging of the at
least one projection device, and at least one light wave guide for guiding the
luminous radiation from the at least one light source to the at least one projection
device via the at least one lead-through.
63. (currently amended) The apparatus according to claim 52, ~~characterized in that~~
wherein the at the least one projection device is arranged in the interior of the
shell so as to be exchangeably arranged from outside the shell.
64. (previously presented) Aircraft, in particular airship, comprising at least one
apparatus according to claim 52.
